und englischen Homöopathie Bücher vorgestellt.

MENTAL SYMPTOMS

Carcinosin exhibits an abundance of miasmatic expressions at the mental and emotional planes. They are sensitive to slightest emotional and mental impressions. They cannot stand any type of vituperation. Blaming and criticism make them traumatized. There is a static fear of humiliation and rejection. They usually come with a traumatic mental and emotional childhood history.

Carcinosin is an important remedy for the *bad effects of reprimands*. It produces such deep impressions that they get upset and go into lamenting spasms. Emotionally they are very vulnerable. They try to conceal it all through their life. Discontented owing to the domination of others. Children of dictatorial fathers. The constitution having grown up in unfavourable circumstances, both familial and environmental, develops a strong need to establish order. It is seen in the cases of both adults and children.

A boy who has been doing well in his studies suddenly goes backward in his performance at school following reprimands from his teacher (*Aur met.*). Recent effects of reprimands; they affect the memory that develops into a static fear of humiliation. At school the classmates take advantage of his lack of confidence and bully him. Here the child lets others to violate his own space and he is weak to throw them out. He becomes tired, irritable and

forgetful, forgets his daily lessons and develops brain fog. All these traumatic experiences during childhood curl around to emerge as the Carcinosis pathology.

They want to desperately breakout from this situation and blossom in their life. The want of self-confidence is compensated by the child becoming extremely quiescent to the demands around him. He tries to please every body in authority. These make them *highly fastidious* (*Ars.*, - Insecurity, *Nux v.*, - Ambition). This strong sense of order drives them to become very tidy. They want to keep their belongings very clean and neat. Wants to wash hands repeatedly. This sense of cleanliness makes them intolerant to disorderliness. They do not want to cause any reason for anyone to complain about them. It is a struggle for these individuals. This is the phase where the sycotic miasm becomes dominant over the other two. Certain Carcinosis individuals, even when very ill or fatigued cannot take rest by themselves. She goes on cleaning the house and bathrooms as long as she can. This shows the intolerance of criticism. She does not like to be blamed because of her illness. Fundamentally they are a little bit untidy (opp: *Ars.*).

Girl dresses immaculately and keeps every hair in position. She cleans the utensils repeatedly and is cautious about cleanliness. Fears that she might get infections or

Awakened by shudders. His sleep is interrupted many times by involuntary jerks, as if from fright. There is general twitching of the muscles during sleep. Children perspire profusely during sleep.

Dreams

This remedy is pregnant with a lot of dreams. Their dreams are full of daily predicaments and so they sleep miserably. Dreams of getting ill. They dream of making adventurous journeys. Dreams of traveling. They have dreadful dreams of murder. Carcinosisin has frustrating dreams like frantically *searching for someone and failing* to find them. Their dreams are exhilaratory or weary, with anxiety. Dreams of occupation. Dreams of drifting and flying of vampires. Prophetic and Clairvoyant dreams. Dreams of long past events.

Perspiration

Carcinosisin has offensive perspiration. It is profuse. Mothers complain of their children on account of drenching night-sweats.

Fever

Carcinosisin is a good remedy for fever. Fever of known and unknown origins. They include Infectious Mononucleosis, Systemic Lupus Erythematosus and Rheumatic fever. Grave types of fever, so acute and exhausting that it devitalizes the patient (*Kali ars.*). Patient cannot recuperate after these
