In unserer [Online-Buchhandlung](#) werden alle deutschen und englischen Homöopathie Bücher vorgestellt.

[Narayana Verlag](#) ist ein Verlag für Homöopathie Bücher. Wir publizieren Werke von hochkarätigen innovativen Autoren wie [Rosina Sonnenschmidt](#), [Rajan Sankaran](#), [George Vithoulkas](#), [Douglas M. Borland](#), [Jan Scholten](#), [Frans Kusse](#), [Massimo Mangialavori](#), [Kate Birch](#), [Vaikunthanath Das Kaviraj](#), [Sandra Perko](#), [Ulrich Welte](#), [Patricia Le Roux](#), [Samuel Hahnemann](#), [Mohinder Singh Jus](#), [Dinesh Chauhan](#).

[Narayana Verlag](#) veranstaltet [Homöopathie Seminare](#). Weltweit bekannte Referenten wie [Rosina Sonnenschmidt](#), [Massimo Mangialavori](#), [Jan Scholten](#), [Rajan Sankaran](#) und [Louis Klein](#) begeistern bis zu 300 Teilnehmer.

FOREWORD

It is true that this century has brought the most dreaded diseases to mankind - AIDS

A disease where death is the only prognosis! The world's largest resources and research have been put to the task of finding a solution to it. Many a book has flooded the market, including the graphic movie " Nidaan" which brings to the fore the poignant emotions of the whole family of the victim. Victim is certainly a more appropriate word for the person affected with this dreaded disease. The word 'patient' conjures up an image of someone who is sick and when treated, is going to get well. That is to say, he has chances of recovery. But here, once you get the disease you are through with life and will die for no real fault of your own. It is indeed scary.

No wonder then, that the world has put all its resources to find a solution. The problem is really vast and acute. And the disease is not only the worst we have ever seen, it is terrifying. There can be no disease worse than this!!

A BIT OF HISTORY OF MEDICINE:

But if we think back, we will see that every century brought with it one dreaded disease.

At the turn of the century, there was leprosy. The leper just left in the leper colony to die with no contact with the world except that food and sustenance was given to you. The best portrayal of this was seen in the movie Ben-hur and where the only possible healing was the miracle of God- Jesus Christ.

In the Victorian era there was Tuberculosis. Today we can look on it with impunity, because we know it is caused by germs and germs can be overcome by many means- medicine, good living and patient can be healthy again. But in the century it happened, it was the end of the line. You just were sent to the sanatorium to live out your last days.

Then the 20th Century brought Cancer. The work spelt a death knoll. Before we even got a proper grip on and before our fight against Cancer was even won, the 21 st century approached, and AIDS entered the arena and showed its gory face.

And Aids has certainly knocked the daylights out of us. We just had no

clue what to do about it.

Any wonder then that today it holds the world's pre-occupation? What I am trying to convey is that every disease is potentially fatal, unless it can be brought under control in the early stages.

And so it goes on ---- one disease worse than the other, requiring more and more heroic efforts, and more and more potent and dangerous medicines to cure it. And the outcome? The system retaliates by producing a still worse disease. Where will this end?

So the solution has to lie somewhere else: not to kill the disease but to improve the patients' own immunity. A strong immunity does not allow bacteria or virus to take hold and grow. If grown it helps him fight his disease. But in Allopathy the dictum seems to be kill the disease and along with it almost kill the pt, and then bring the pt slowly back. But certainly leaving him considerably compromised in the process.

Viewed from this point of view, Homoeopathy is the only real viable alternative especially for the immune disorder, which is AIDS. It is a vitiated immune system and has to be righted.

Homoeopathy has certainly shown results but in pockets. It is time the results were available to the rest of the world.

Dr Baig's book is a beginning in that direction.

Today's generation, as Dr Baig puts it, is immuno-compromised. Like walls without bricks which need protection. AIDS is the result of an internal environment created by many factors- the environment, the pollution, the internal psychological milieu etc. Under Homoeopathy they recoup their strength, stamina and immunity. In pathological terms, it has been shown that under the influence of the Homoeopathic remedy the marker cells reduce, but the viral load increases and then becomes significantly low.

2 Nosodes have been identified and introduced after proving on thousands of HIV patients. Now the research is on to introduce it as prophylactic.

These nosodes are based on the homo-immunization - isopathy i.e. prepared from the diseased state itself. But used on the principles of Homoeopathy "Like cures Likes" not 'same treats same'

2 types of HIV constitutions have been identified in which different nosodes are useful.

HIV-1 : constructive and creative personality with P/H of Diabetes, cancer, Tb psoriasis and so on. The persons in this category are industrious, honest, committed but sensitive leading to suicidal tendencies.

HIV-2 on the other hand are individuals, who are frustrated and destructive, with an allergic background of asthma, marasmus and resistant TB.

The accent is on prevention. This has been advocated by Homoeopathy all along. Dr. Baig the allopathic mode of immunization seems to somehow interfere with the order of nature, thus every time giving rise to a new virus, bacteria and producing resistant strains. The problem has always been that the surface glycoproteins keep on changing, each time producing a new strain, thus making it difficult to find one single vaccine. Then again it has been seen in history of medicine that the immunity produced by a natural disease is strong and lasting, not so true of vaccine-produced immunity.

But the basic consensus remains to produce immunity and raise the immune protection system of the body. The population at large and especially the susceptible populations- like truck drivers, soldiers, i.e. those who keep away from home for long periods and sex workers, should be concentrated on.

This then is the focus of the book: the vaccines, numerous cited cases where Homoeopathic medicines have been used effectively to cure various related diseases and to prevent them. The miasmatic understanding of the problem and other remedies indicated have been discussed. Now it is upto the profession, primarily our Homoeopathic brethren, to take up and carry on this work and then make it acceptable to the rest of the medical world at large.

I recommend we all pool our resources and unite to make this dream come true.

Dr. Vishpala Parthasarathy

Editor

National Journal of Homoeopathy,
Mumbai.
