DAY-4

Chapter 13:

Dr. Anita Salunkhe:

The topic for today will be knowledge about miasms. We have already seen how miasm can be taken from the nature of a person, his behavior, the pathology, the disease he is suffering, and also from his looks. Today, we will see how miasm can help us in understanding the case, evolving the right similimum and also in management of the case. I have learnt something different from this case. I will share with you the peculiar defense mechanism of miasm today, from a video case of *schizophrenia*.

Case 1:

A case of schizophrenia. It is a mental illness marked by extreme disturbance in thinking and personality. There is a total disorientation in personality.

The patient is an unmarried man, aged 44years. He was brought forcefully in October 2000 for Homoeopathic treatment. His first visit was when he was admitted in the hospital for chronic schizophrenia. My first observation was: he was not wearing any clothes, he was restless, rocking constantly, violent, agitated, and angry towards his family for getting him admitted. He was constantly murmuring, "Why waste money? Why spend so much money?"

Ailments from: He was a person with no relationship with anyone in the society. Just before the attack, he was charged with heavy fine for not paying society maintenance charges. This provoked him. He directly went to the secretary,

abused and bashed him (rage—syphilitic). After this, he had sleepless nights for four days and started behaving abnormally. He was restless, abusive to the watchman and to people on the road. When his parents (in their 70s) tried to pacify him, he pushed his father down on the floor and twisted his mother's hand. This compelled the parents to get him admitted.

Past history:

As a child, he always suffered from cold. Diabetes mellitus and hypertension since past two years. He has been on psychiatric treatment off and on since ten years.

Personal history:

Appearance : He was dirty and shabby in dressing.

Thirst : Very much + + +.

Thermals : Hot, always needs the fan, also wanted AC in the hospital.

Nature:

He was a clerk in a bank, but owned a flat of 40 lakhs. He said he had no vices, but he always had an ambition to earn more money. So, he would lend money on interest and earn money from that. His sister said that he was very particular in spending. He is very money minded. He has no friends or relations; always a loner. He said "everyone knows that I have a lot of money, so everyone can take undue advantage of me." He would quarrel even with his near family members when they asked him for some money. But when given some work, he would do it without fail. At work also, he had quarrels with everyone as he felt all are against him and want to take advantage of him. He was very particular in his work; would not rest until he finished his work. He always said if man is born, he has to work to live. He is religious and plays musical instrument. All his family members are playback singers.

We will start with his video: Just see and understand his looks, his features, reactions, and his attitude.

Dr. Anita: So, what do you think this man is?

Delegates: Mistrustful, avarice, suspicious, industrious, responsible, and ailments from anger.

Nature (continued): He is a clerk and one of the officers is trying to harass him in the bank. He is telling us how she is keeping a watch on him and everyone

is giving him all the work. So he said he would take the matter to the parliament. "I am so particular in work and you ignore me, then it affects me. I feel angry, to people like me they do that!"

Dr. Anita: His looks are syphilitic, very thin, cheeks have gone in. He is expressive. He is just telling how he is troubled at office. He has hasty speech. This has slowed down much after the remedy. **Patient:** I am very much interested in music.

Dr. Anita: What do people trouble you about?

Patient: They will rob me. When I was young, in sports also they used to trouble me, not allow me to do fielding and in college and in music also, 'I was always side-tracked.' I get angry. *People are just against me.* They come and harass me. At office, I do not keep anything pending. I finish my work the same day. They come and give me more work at 4:00 p.m. or 4:30 p.m. and I still do it. Goal and motive in my life is to make money. Since 5 to 6 years, I do not have much money, so I have become more stingy now, I collect money and invest it so that I can make extra money. Everyone is selfish and mean, my parents, sister, friends, etc.

Dr. Anita: So, this is the case. We will start with the analysis. All the cases, which I will be showing you, are one-sided. Examples of one-sided diseases are schizophrenia, obsessive-compulsive disorder, and maniac depression as there are very few symptoms.

Hahnemann has said in *aphorism 173*, "**the only diseases that seem to have but few symptoms, and on that account to be less amenable to cure, are those, which may be termed one-sided, because they display only one or two Principal symptoms, which obscure almost all the others. They belong chiefly to the class of chronic diseases (both at mental and physical level.)**"

How to go about in such cases? *Aphorism 210* says, "**the one-sided disease appear to be more difficult to cure in consequence of this one-sidedness, all their other morbid symptoms disappearing, as it were, before the single, great, prominent symptom. Of this character are what are termed as mental diseases. In all cases of disease, the state of patient's disposition is to be particularly noted, along with the totality of symptoms, if we would trace an accurate picture of the**

disease, in order to be able therefrom to treat it Homoeopathically with success." *Aphorism 211* says, "The state of disposition of the patient often chiefly determines the selection of the Homoeopathic remedy, as being a decidedly characteristic symptom, which can least of all remain concealed from the accurately observing physician."

Disposition is the dominant quality, which distinguishes a person's attitude towards life around. It is a basic reaction, a tendency to act in certain manner under given circumstances, e.g. if a same situation comes, every person will react differently and this reaction itself will distinguish each person from one another. Some can be defiant, some mild—this is the undiseased nature. Hahnemann has already said that we have to take the basic genetic nature, the undiseased nature.

Next, is his temperamental make-up—mentally, physically, and emotionally and his body built-up. Failure starts coming when you go for emotions - *do not ask how you feel, ask how you reacted in that situation* - I was quiet, angry, etc. Feeling can be happy, sad, anger, etc. *Reactions are controlled by genes. Emotions are from neurotransmitters, proteins, which are controlled by genes.* So, if we consider neurotransmitters, we are like allopathic physicians. Allopaths know just how to control neurotransmitters by tranquilizers, anxiolytics, etc. If we give IGNATIA for grief, STAPHYSAGRIA for anger, these will be only neurotransmitters. We have to consider the genetic make-up. Now how to proceed in each and every case?

^ Understand the make-up—physical, mental, and general. ^

Ailments from.

^ Journey of disease, how it has progressed, which layer is it in, how we have to revert him back now.

^ Miasm.

Analysis:

^ Physical make-up :	Height and weight	Lean and thin
	Face and feature	Dirty, sallow complexion, ugly—syphilitic.
	Hair	Thick and rough, indicating strength.

Mental make-up : Expression : Rage, fury, anger, violent.
 Will : Strong, obstinate headstrong. If he decides, he has to do it.
 Morals: Conscientious about trifles, work is worship (he said this twice in the video).
 We are born here to work.
 : All emotions are there -anger, Emotions rage, suspicious, etc.
 : (towards light/noise/music/
 Sensitivity injustice?) Sensitive towards money matters+ + .
 : Nil. : Anger.

General make-up
 Attachments : Fast.
 Ailments from : Fast.
 Speed : In mental diseases, it is very
 Speech difficult to get these, later on I got
 Craving that he loves hot drinks.
 Thirst :
 + +
 Thermals : Hot.

We need a remedy, which has to have all this. What is the miasm after ailments from rage and anger? It is syphilitic. If it is grief, it is sycotic. If it is fright, it is psora or syphilitic. So, even the ailment from decides the miasm.

What *layer is the disease in?* 6th layer. He travelled from cold and cough to diabetes and hypertension and to schizophrenia.

Journey of disease: Bronchitis (2nd layer, psora) to hypertension (4th layer, psora) to diabetes (5th layer, sycotic), schizophrenia (6th layer, syphilitic).

So, now we have:

+ Rage/anger/quarrelsome/fury.

- ^ Suspicious, mistrustful.
- + Insanity, madness.
- + Fast speed, restless.
- ^ Abusive, insulting.
- ^ Avarice.
- ^ Conscientious about trifles.
- + Dirty, shabby.
- ^ Money minded.
- + Hot patient.
- + Thirsty.

The remedies that come up are: SULPHUR, ARS-IOD, LYCOPODIUM, HYOSCYAMUS, and STRAMONIUM.

Take 7 to 8 days to understand the case, but do not prescribe a wrong remedy in schizophrenia. In this case, it was my first remedy. Take the defense mechanism at the cellular level in account.

Now we have to see how these remedies will act in the syphilitic state.

Ars-alb : Insanity from grief, shock, fright (but not rage), chilly (patient hot).

Lycopodium : Insanity from jealousy, haughtiness, envy.

Sulphur : Insanity from loss of position, religious insanity, dirty, filthy, position more important, not very money-minded.

Hyoscyamus : Ruled out, as the patient is not erotic or foolish.

Nux-vom : Insanity from excessive mental exertion or mental labor, chilly.

Stramonium : There is no fright here.

Homoeopathy is an art. There is no hard and fast rule. Now what is to be done? So, now here we fail.

Aphorism 153 says, **take the more striking, singular, uncommon and peculiar characteristic signs and symptoms.** So, where has the patient lost his defense in the syphilitic state? What is his peculiar symptom in the present miasm??

Tormented feeling. What is uncommon in the syphilitic state?? His conscientiousness. In the syphilitic state, we lose our morals. So, I need a remedy,

Dr. Anita: The patient forgets what was wrong with him. His speech is now not that hasty. His cheeks look better now. He again is talking about money. His basic nature will not change. Now he says, "It is okay, we will see. It happens sometimes." Today he is praising and appreciating his family members!!

Patient: I got a very good sister. They *never disturb me*. I was troubled because of my own 'karma'. My parents are gems. My delayed marriage is also due to my 'karma'. I completely stopped that business of money. I am happy being religious.

Dr. Anita: I started the case in October and in January, he came and said that he had completely stopped all the allopathic drugs. His diabetes had increased after the medicine, his diabetes is still there, it is not completely gone, but it is under control and he is not taking any allopathic drugs for it. He is still under my treatment. There is a total change in him now, in his behaviour. He was a chronic schizophrenic.

Let us go to the second case. I learnt a lot from this case. Here I learnt that not to try to fit the remedy in any case. If patient is not improving, it is failure of the Homoeopath and not Homoeopathy. It is we who fail to get the right remedy because we are not observant and do not apply the *Materia Medica*. Homoeopathy never fails. In schizophrenia, you have to see the changes, how the miasm changes, what are the parameters, when to stop the allopathic drugs. No counselling is required in such cases, as it can cause suppression. Secondly, do not stop the allopathic drugs immediately. You have to taper them down gradually. The last follow-up was when he had completely stopped all the allopathic drugs. The dose was repeated 2 to 3 times; we do not have to repeat it frequently.

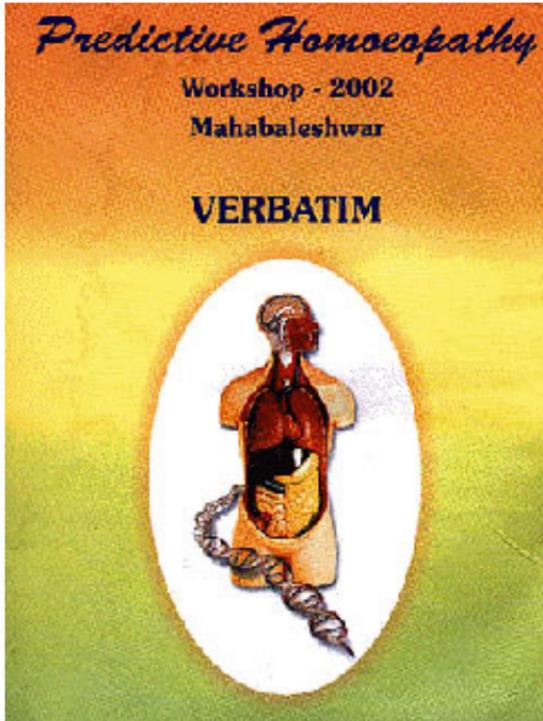

Case of an imbecile child:

This is again a one-sided disease. Here also we have to take the prominent symptoms and the genetic nature. It is very easy to prescribe a remedy in such cases, but a right understanding of the follow-up is required.

Imbecility is again a one-sided disease. It applies to those mentally handicapped who are incapable of managing their own affairs. It, therefore, represents a lesser severe degree of mental impairment than idiocy.

Chief complaint:

Male child, aged 4years, was brought to me in February 2001 for dullness, slowness in understanding and eating, and he was weak in studies. He was
