HYOSCYAMUS NIGER

A case from my early records treated by me when I had just started practicing homoeopathy and learning this method. This patient aged 28 took an appointment from me on phone. On entering into my chamber he looked up and asked if he could see the Doctor as he had an appointment. A bit upset with his question, I told him, that he was talking to the same Doctor.

He looked at me surprisingly and said that he meant a homoeopathic Doctor. When I clarified his doubt he begged my pardon and said that his impression of a homoeopath was that of a middle aged or an old man. I nodded at him and offering him seat, asked for his problem. He said to me, "Since one month I am having pain in the knee joint (right - side)." He asked me, I hope you know what is knee joint?

Hiding my emotions, I said to him, "Yes", I know what is knee joint." In a polite way he said, "I asked so because I have an impression that homoeopaths don't study like allopath in detail about the body structure." I informed him we also study like any other medical Doctor in our colleges. I asked him for how long he had been suffering from the pain? He told me the problem had started a year back. Initially it used to be very mild pain, for one day coming after a gap of 2-3 weeks. He thought it could be because of some exertion. Then he started having it more frequently with increase in intensity of pain.

Did you consult any Doctor, I asked him? " No, I did not care about it,

**INDIFFERENCE,
complain, does not**

I usually do not complain about my problem. Even my family members have come to know about it very late, it is by chance that a few days back my mother noticed me walking with some difficulty. That day she asked me if there was any problem in my leg.? Then I had to tell her that I have pain in my knee joint. She asked me whether I have consulted any Doctor.

WELL, says he is, when very sick DELUSIONS, well, he is

I told her casually I don't need to consult any Doctor. I am fine. It is just a normal pain and will be alright in a day or two. In fact I myself did not feel any thing serious about it.

I was under the impression that it could be just a normal pain and might have happened due to some over exertion and will disappear on its own. More over it was not troubling me. I was able to do my routine work with an ease." (Hindi version : Mujhey isme koi aisi baat bataney wali lagi nahi. Ab dard ke liye aadmi kisi ko kya batay. Dard hai to hai)

He said," Now I regret and feel that it was not right on my part to ignore it. I should have taken some step for it.

REMORSE DELUSIONS, wrong, he has done

Once or twice I thought of consulting a Doctor when the pain had become severe but I failed to understand the nature of my problem. I was not sure of the kind of problem it was and whom to consult for it"

Groping as if in the dark

He further said, "I get frightened whenever the pain becomes severe. That time I get the feeling oh! What kind of a pain is it." From outside I never show any sort of fear. I try to be bold in front of others. I show and act in a manner as if I am a very carefree person but internally I am not like that.

AFFECTATION gestures and acts, in

If somebody tells me or if I read some article about my problem or come to know from some other source about the consequences of having pain in the joint then I would not sleep for whole night I start relating it to my problem. I think that may be I am also having the same problem. Then I get demoralized."

(Hindi version Upper se to mai bahot bold banney ki koshis karta tha Kya hai, dard hi to hai. Aisa hota rahta hai. Kuch nahi hai. Sab theek ho jayga. Par under se darta tha ke kahin kuch gait na ho raha ho, investigation se bhi darta tha ki kahi kuch galt na nikal jaye.)

He said, "Then in the morning I balance my self with positive thoughts. Then I try to calm down myself by thinking that I don't have such an such symptoms which have to be specifically there for an arthritis patient. Then I try to have information from people who already have this sort of problem. Somebody says it could be possible to get cured and somebody says it could not be possible. Then I think that I am unnecessarily bothering about it so much. Nothing has happened to me. Then I tell my self not

live your life happily and enjoy it

**HIGH,
spirited**

**WELL, says he is,
when very sick**

He said, " If somebody asks me How am I , I reply to him, "I am absolutely fine".

He said, " I don't have guts to ask the person why he has asked so. Does he really feel that there is something wrong with me. Why you can't ask this question?

I am afraid probably he may say Yes, definitely he can see some problem with me. I think I will collapse there on the spot.

I avoid knowing anything bad related to my problem.

**LIGHT,
shuns**

He said, " Still I have the strong curiosity to know about my problem. I like to read articles pertaining to this

CAUTIOUS

INQUISITIVE

topic in health magazine.

I inquire from my friends, relatives or from any person who is already suffering from it. But that is limited. I don't like to go more deeper into it. I read or like to know upto the point till I feel that there is nothing to get scared about..

He said, " But if I come across some points which are more close to my problem then I check my joints and imagine that very soon my joints will get crippled and I would have to live like other arthritis patient.

**DELUSIONS,
injured, injury is
about to receive**

Then why you read such articles, I asked him.?

DELUSIONS,

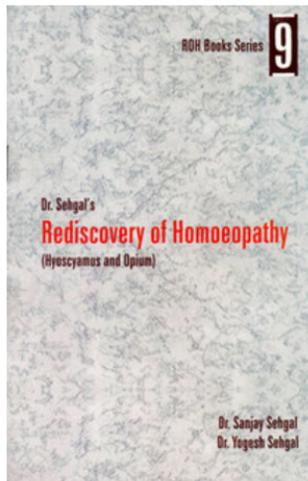

wrong, he has done

He said, " I also feel that I am doing wrong." But

my problem is I can't trust upon others' opinion.

Sometimes my friend tells me not to worry so much about my problem. There is nothing to worry, there is treatment for everything now a days.

Sometime I feel good about it, then I suspect may be he is trying to fool me. If some friend or relative tells me that I should go for thorough
