Curative Role of Diet	231-239
Chapter-17	
Homoeopathic Manufacturing Industry	240-251

INTRODUCTION

The basic content of this book might appear to be somewhat ambitious to a homoeopathic practitioner in general. Health, disease and homoeopathy especially in relation to fundamental questions of scientific explanation of homoeopathy are indeed deep and ponderous issues. Nevertheless there have been discoveries made in modern times, which shed new light on the basic principles and methods involved in such issues. This book is an endeavor to elucidate the relatively simple principles and methods involved in healing, not only for the professional but also for the general reader who wishes to enter the subject in depth. The working principles of homoeopathy and the action of homoeopathic medicines are not very clear; even then the therapeutic results given by homoeopathy are miraculous. There are many missing points and confusing issues, many unknown links in the theory of homoeopathy for which there are no explanations from the masters of time.

In this book an effort has been made to link the theory of homoeopathy to scientific grounds.

The book highlights the importance of alternative therapies in health care system. How modern science has led us away from the basic meaning of good health? Why homoeopathy is an important healing system in health care today? The book also goes on to explain the link between body and mind, which is acknowledged by homoeopathy and is now being accepted by the modern science.

Many common diseases and the efficacy of homoeopathic

treatment for them are explained. Homoeopathy while taking care of immediate problem also strengthens the body's defense mechanism leading to long-term cure in many diseases.

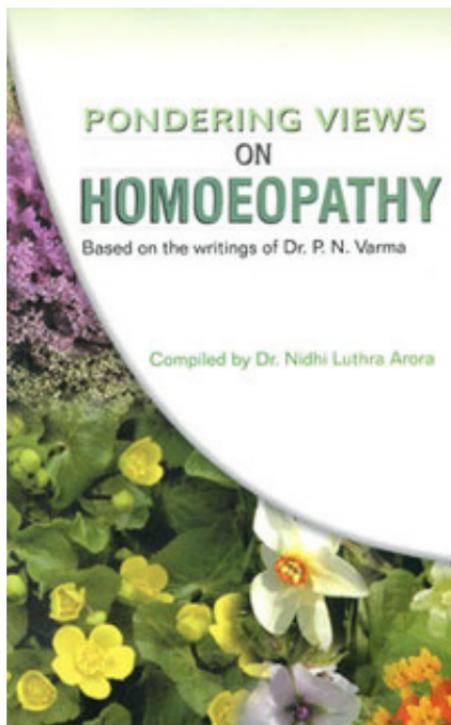

Homoeopathy is among the most popular forms of traditional medicine globally. The book briefly describes the past, present and future of homoeopathy and the challenges faced by homoeopathy today. The book provokes us to think of our homoeopathic field and sees how far it is prepared to face the changing scenario and the challenges from its competition.

Homoeopathy at one time had less than hundred medicines. It went on increasing. The homoeopathic pharmacopoeial list compiled by the Government has over 2370 medicines. The book makes you ponder on whether updating of homoeopathic materia medica is needed? The action of homoeopathic medicines has been explained on scientific basis.

Many people have dropped homoeopathy because they could not see scientific rationale. One question is always asked — what is homoeopathic potentisation and does it contain anything? In this book an effort has been made to explain the scientific rationale of homoeopathy.

Homoeopaths have varied ways of prescription of medicines. The book goes on to explain these varying prescriptions of different homoeopaths, the controversy between high and low potencies and the increasing use of mother tinctures, which are not considered to be truly homoeopathic.

All the issues talked about in the book provoke the thought process and makes one ponder on them.
